

You Can't Control People. Control What's On Your Network.™

Mirage Networks® helps enterprises defend their networks from day-zero threats and policy violations with full-cycle Network Access Control (NAC) technology designed with the real world in mind – one of fluid network perimeters, heterogeneous networks and tight IT budgets. Thousands worldwide rely upon Mirage to secure their internal networks from threats that consistently bypass perimeter solutions, enabling them to protect their mission-critical data and thus, their businesses.

OUR MISSION

Mirage Networks is a network security company dedicated to delivering real world, complete NAC solutions, serving the enterprise through a strong channel of resellers, original equipment manufacturers and managed security service providers. Unlike others, we ensure a user-friendly and IT-friendly experience that never forces a compromise between business objectives, effectiveness and usability. Our passion for innovation has paved the way for the development of patent-pending behavioral technology that consistently wins industry awards.

OUR RECORD

Our seasoned executive team – boasting a total of seven acquisitions and two IPOs between them – has set a course for excellence while establishing a robust financial foundation with consistent revenues and a strong balance sheet. This enables us to achieve successes in a variety of areas, including:

- Being a **Network World Enterprise All-Star** strategic partner
- Winning the **SC Magazine 2006 Award: Best Anti-Worm Solution**
- Being honored as a **Gartner Cool Vendor** in Security for 2005
- Receiving a **4-star review** in Software Development Magazine
- Winning the prestigious **Jolt Productivity 2005 Award**

OUR CUSTOMERS

Enterprises seeking a greater level of control over network access, as well as resellers, managed service providers and switch vendors who are looking for an easy, high-ROI solution to complete their offerings with network access control, benefit from the powerful solution Mirage offers.

The unique design of our solution is already being leveraged by the likes of AT&T, as part of its Managed Services portfolio; Mitsui & Co. Ltd, one of Japan's largest companies, to round out its security offerings for its customers; and National Instruments, the premier developer of test and measurement software, to bolster its network security at its offices around the globe.

Our customers are organizations concerned with:

- effective protection against day-zero threats and policy violations
- flexible integration with other security technologies
- network infrastructure- and OS-independence
- scalability across voice and data networks
- easy deployment and management
- IT- and user-friendly

Founded in 2001, Mirage is an innovative provider of technology uniquely designed to protect the network interior from the damage of viruses, worms, hackers and policy violations. By partnering with leading solution and service providers, Mirage provides its users with unparalleled security, to optimize network resources and productivity.

...a revolutionary
solution to protect
important corporate
assets...

- Kazuhiro Nomura, CEO,
Mitsui Bussan Secure Directions, Inc.

"With the number of malware exploits that have targeted enterprises recently, we felt Mirage was a critical addition to our security defenses. It provides the ability to block compromised devices from the network one-by-one, keeping threats contained while allowing the rest of the network to function as normal."

- Lynn McGuire, CIO, Andrews Kurth LLP

"Mirage Networks' solution fits our needs perfectly by giving us an agentless, hardware agnostic and behavior-based appliance that stops rapidly propagating threats on day-zero."

- Brett Childress, Director of IT Infrastructure, National Instruments

"Mirage gives us the ability to protect our business against attacks that cause downtime, keeping our IT staff productive and focused on business-enabling technologies."

- Chuck Stanton, SVP of IT, Paul Financial

"The Mirage approach simply makes the most sense. We've examined other solutions, but their effectiveness is based on requirements that are simply unrealistic. Mirage's self-contained and infrastructure-independent design is an effective answer for my real-world network."

- Chris Hanson, IT Project Manager, Kern School Federal Credit Union

"We value our relationship with Mirage Networks because their product and strategy complement our offerings and ensure our customers receive the high quality and functionality they have come to expect from working with us. The ChannelFirst program continues to set Mirage Networks apart from the field, as it represents their dedication to our success and to our customers. It's a win-win."

- Media Landry, VP of Sales, igxglobal
