

Our Customers Say It Best...

"Mirage Networks gives us the ability to protect our business against attacks that cause downtime, keeping our IT staff productive and focused on business-enabling technologies."

- **Chuck Stanton, SVP of IT,
Paul Financial**

"Mirage fit our needs perfectly by giving us an agentless, hardware agnostic and behavior-based appliance that stops rapidly propagating threats on day zero."

- **Brett Childress, IT Director,
National Instruments**

"With Mirage Networks, we are able to provide a revolutionary solution to protect important corporate assets from attacks that have continued to evade...firewalls, intrusion detection and intrusion prevention systems."

- **Kazuhiro Nomura, CEO,
Mitsui Bussan Secure Directions, Inc.**

"Mirage's approach is ideal for protecting internal networks. The behavioral detection identifies new and unknown threats that are able to bypass firewalls and host-based IDS systems, and the automated containment takes attackers and infected devices off of the network – without interrupting legitimate business traffic."

- **Tim Burke, President and COO, Quest**

"With the number of malware exploits that have targeted enterprises recently, we felt Mirage was a critical addition to our security defenses. It provides the ability to block compromised devices from the network one-by-one, keeping threats contained while allowing the rest of the network to function as normal."

- **Lynn McGuire, CIO, Andrews Kurth LLP**

"Having dealt with recent worm outbreaks, we clearly saw the value of implementing a solution that can immediately identify and automatically contain threat sources. Mirage is extremely compelling because it provides automated threat response without being in-line on the network."

- **Randy Oehrle, Network Administrator,
The City of Overland Park**

"We value our relationship with Mirage Networks because their product and strategy complement our offerings and ensure our customers receive the high quality and functionality they have come to expect from working with us. The ChannelFirst program continues to set Mirage Networks apart from the field, as it represents their dedication to our success and to our customers. It's a win-win."

- **Media Landry, Vice President of Sales, igxglobal**

You Can't Control People. Control What's On Your Network.™

About Mirage Networks®

Mirage helps enterprises defend their networks from day-zero threats and policy violations with full-cycle Network Access Control technology. This patent-pending solution uniquely protects the network interior, controlling network access for any endpoint, no matter the operating system or device, without agents, signatures, rearchitecture, or high overhead, at every point in the network cycle. For more information about comprehensive internal network protection at a low total cost of ownership, contact us today.
